

CONSERVATIVE STRATEGY INVESTMENT POLICY SUMMARY

QUILTER CHEVIOT
INVESTMENT MANAGEMENT

INVESTMENT OBJECTIVE

The primary objective of the Quilter Cheviot Conservative Strategy is to grow the capital value of the portfolio as well as generating some degree of income.

STRATEGY

The Quilter Cheviot Conservative Strategy is a diversified portfolio comprising predominantly fixed interest and a small exposure to domestic and international equities. Equities will provide the opportunity for your capital to grow over time as well as dividend income. Fixed interest will provide stability of capital and a regular level of income. We may also include an allocation to other types of investment such as commercial property, absolute return or hedge funds, structured products, private equity and commodities (sometimes collectively referred to as 'alternatives'). We shall blend the growth, income and risk characteristics of these investments in your portfolio to aid diversification. Exposure to specialist areas will usually be achieved via collective funds.

As at 30/06/2018

ESTIMATED RETURNS

Portfolio managers use estimates of the long-term future returns of different types of assets to construct balanced portfolios. Not surprisingly, the riskier investments, such as equities, are usually forecast to produce the highest rates of return but history shows that the outcome can vary quite widely compared with expectations. There are various technical ways of measuring the expected outcomes used by industry professionals but, to simplify matters, Chart 1 translates these into annual return ranges for different portfolio strategies. The Conservative Strategy has an estimated annual return of 4.1% over the longer term. Using future expectations of risk, the range of outcomes could be as high as 10.5% or as low as -2.3% per annum. **Forecasts are not a reliable indicator of future performance. RISK

Having looked at the potential future returns, we need to consider how the Strategy might react in adverse conditions. By their nature these are largely unpredictable in terms of both extent and timing but investors are particularly sensitive to these events and the publicity surrounding them. For illustration we have taken five such events in the last 30 years when the FTSE All Share index (£) has fallen by more than 10%.

In the bar chart above, each bar shows how the FTSE All Share Index (£) and the Conservative Strategy responded to each event.

The portfolio stress test is good for illustrating how a portfolio has reacted under specific events but does not provide a complete picture. This is where the concept of peak to trough drawdown fits in.

Drawdown illustrates the peak to trough movement and also helps to provide an indication of the time taken to recover back to previous levels.

The drawdown chart above shows the drawdown for the Conservative Strategy over the last 30 years. During severe market downturns, the Conservative Strategy was down around -20.0% peak to trough.

SUMMARY

The Quilter Cheviot Conservative Strategy is a diversified portfolio comprising a range of asset classes. It is one of our core strategies, which range from 100% fixed income to 100% global equity with differing risk and return profiles.

Selected holdings are researched by our dedicated team of research Analysts and Investment Managers. Your Investment Manager has the flexibility, within a controlled framework, to tailor your portfolio with regard to asset allocation and security selection, in order to accommodate your investment requirements.
