

MANAGED PORTFOLIO SERVICE MPS INCOME

MAY 2019

QUILTER CHEVIOT

OBJECTIVE

The investment objective is to grow the capital value of the portfolio as well as to generate some degree of income. The Quilter Cheviot MPS Income Strategy is designed for an investor with a time horizon of more than 5 years, and a medium tolerance for risk that can accept moderate variation or disruption to capital value or current income in order to achieve their longer-term objective.

The Quilter Cheviot MPS Income Strategy is a diversified portfolio comprising predominantly domestic and international equity funds as well as some exposure to fixed interest funds. There may also be an allocation to funds investing into "alternatives" such as commercial property, private equity, commodities and absolute return strategies.

IMPORTANT INFORMATION

Past performance is not a reliable indicator of future returns. The value of investments and the income from them can go down as well as up. You may not recover what you invest.

* The strategy benchmark was 100% FTSE UK Private Investor Income Index to 3 April 2018, changing to 100% MSCI WMA Private Investor Income Index thereafter. The benchmark performance since inception is therefore shown as a combination of both benchmarks and may differ from the performance calculated for one of these alone.

The historic yield data is calculated using the previous year's dividend information and the bid or mid price from the last dividend. Data provided by Financial Express (FE), Quilter Cheviot (30 April 2019). The level of yield actually achieved on your portfolio will be dependent on the tax treatment of the product you have invested in and your personal tax circumstances.

Volatility is a measure of risk and measures the variability of price fluctuations of an investment, or a portfolio of investments. Realised (i.e. experienced) model volatility is expressed as the annualised standard deviation of returns over the stated time period(s), calculated using monthly data. The realised drawdown is the peak to trough decline experienced by the model over the stated time period(s), calculated using monthly data. Estimated annualised volatility and drawdown figures have been calculated based upon an historic analysis of the model's current strategic asset allocation, calculated using monthly data. IA Sector returns are net of the underlying fund manager charges whilst benchmarks will not include any charges.

The asset allocations shown are dynamic, based upon the price movements of the underlying investments. Clients investing in the strategy for the first time, either via new business or a switch, will have their portfolio determined by the fund and asset allocations set at the last rebalance date.

MARKET COMMENTARY

Major stock markets gained between 2% and 4% in April. Better than expected economic news and first quarter corporate results helped Wall Street to a new all-time high. Returns for sterling-based investors were boosted by the dollar strengthening to \$1.29 as the delayed Brexit timetable prompted speculators to close short positions. The FTSE 100 rose 139 points to 7,418, lagging global markets as well as small and mid-sized UK stocks. The oil price was squeezed higher as the US ended sanction waivers on eight major purchasers of Iranian oil.

Economic growth in the advanced economies appears stable – albeit marginally lower than last year – and a long way from fears of a US recession that were circulating a few months ago. While markets were convinced that a US/China trade deal was imminent, the latest setback may simply represent negotiating rhetoric by a President who is keen to secure a second term. The pick-up in US orders for capital goods suggests business investment will accelerate in the second half of the year. Financial markets are pricing in a 50% chance of an interest rate cut during the second half of the year, but this may be premature given GDP is expected to be around 2.7%. US Treasury yields have risen to 2.4% reflecting better economic data and the yield curve is still broadly flat.

By comparison, GDP growth in other advanced economies remains pedestrian. The eurozone faces GDP growth of 1% this year and, while sentiment has been boosted by the Brexit delay, US tariff wars could escalate and German exports may not benefit as much as anticipated from the improving position in China. However, the eurozone's 8% unemployment rate continues to fall and higher wages are supporting consumer spending. Japanese growth remains anaemic, with business surveys suggesting weaker global trade

ABOUT QUILTER CHEVIOT'S MANAGED PORTFOLIO SERVICE

Quilter Cheviot has a heritage that can be traced back to 1771. We are one of the UK's largest discretionary investment management firms, focusing on providing and managing bespoke investment portfolios for private clients, trusts, charities and pension funds.

Our Managed Portfolio Service (MPS) provides a range of discretionary investment portfolios which offer clients diversified exposure to global financial markets. MPS was launched in 2001 and provides clients with a high level of diversification through investment in collective funds. With a strong track record, we offer a range of investment Strategies and the flexibility to switch seamlessly between them without charge should an investor's circumstances or risk appetite change.

PLEASE NOTE

Our MPS does not take unrealised capital gains into account when making changes to client portfolios. This means there may be occasions when realised gains are in excess of your Annual Exempt Amount (AEA), which may result in you having to pay capital gains tax (CGT). Please also be aware that the minimum investment amount for our MPS is £25,000 when accessed through Quilter Cheviot's own nominee arrangements. It may not be possible to align your portfolio to the agreed strategy should the investment value of your portfolio fall below this amount. This may have a detrimental impact on the ability to manage your portfolio to the agreed mandate.

INVESTMENT MANAGERS
